To Whom It May Concern:

In 2012, I contracted Phillips and Koch Construction, Inc. for a variety of projects for Repower-USA, a leading global wind turbine manufacturer. This work was performed for installation of mechanical and electrical equipment in numerous 80 meter tall wind towers. Through me, REpower also utilized the services of Phillips and Koch Construction on a variety of projects in Oregon, Washington and California over the past several years.

As the owner and General Manager of Larry Keele Consulting, I have worked with Phillips and Koch Construction for over 10 years, largely in the waste recycling industry and the woods products industry. They have always performed technically complex mechanical installations with the upmost professionalism, and within, most importantly, the time constraints of the specific project. They live within the budgets given, and present a first class project, meeting or exceeding the owners' expectations. Administratively, their paperwork, credentials, contracts and invoicing is in order at all times.

They are always a pleasure to work with. Their crews are professional; arrive with a full understanding of their scope of work, and work diligently to complete the tasks at hand with no problems.

I will definitely use them again Wind Energy or Recycling projects in the future throughout North America. Simply put, Phillips and Koch Construction, Inc is a first class operation. If the need arises, contact me directly for additional information.

Respectfully,

Larry Keele
